                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Incorporation of genes encoding two enzymes makes the host organisms able to produce (3-HP) from (1). The biotechnological method of preparing (3-HP) is potentially cheaper than chemical synthesis. The present sequence represents the E. coli aldehyde debydrogenase aldA, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
3\text{-Hydroxypropionic acid preparation, for use e.g. as monomer, by fermenting recombinant microorganisms expressing genes for suitable enzymes in the presence of glycerol or glucose -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        or diols, polyhydroxyalkonates and copolymers with lactic acid.

The invention relates to a method of identifying compounds that modulate a newly identified mar regulated (NIME) pelypetide activity. The method comprises contacting an NIME polypeptide with a test compound under interaction conditions, determining the ability of the compound to modulate the activity or expression of the polypeptide, and selecting the modulate the activity or expression of the polypeptide, and selecting the of microbial infections, and in sereening for modulators of NIME expression and activity. These modulators can be used to reduce the infection, the microbe on a surface, and the virtulence of a microbe in a subject suffering from an infection. The S. epidermidis sequences nave antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to seriem for compounds abic to interfere with the S. epidermidis life rycle or inhibit S. epidermidis infection.

N. The sequence data for this pricet did not form part of the printed specification, but was obtained in electronic format directly from the

(1) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (1) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAH52304 to AAH53970 represent nucleic acids (1) encoding polypeptides
                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding polypeptides from Staphylococcus epidermidis, useful for vaccinating against infections, e.g. endocarditis

                                                                                                                     ä
                                                                                                                                                                                                                                                                  The invention relates to antisense inhibitors of genes essential to genes, their use in the discovery of novel antibiotics, the essential genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The probatycles used are Escherichia coll, Staphylococcus areas. Salmonella typhi, Klebsiella promominar, Pseudomenas aeruginosa and Enterococcus faccalis. The promominary, Pseudomenas aeruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acids which are required for coll proliferation in a wide variety of organisms. The present sequence represents an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  70 SWLPKISAGIPERASEISALIVEEGGKIQQLAFVEVAFTALYIDYMAEWARRYEGEILQS 129

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            prokaryotic cellular productation, their use in identifying the genes, their use in the discovery of novel antibotics, the essential genes, themselves and the enough proteins. The prokaryotic staphylococcus amenas, salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Entercoccus faecalis. The invention is also usefui for the identification of potential new targets for antibictic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express those proteins, and to obtain antibodies capable of binding to the expressed proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The proteins can be used to screen compounds in rational drug discovery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ohlsen KL, Zyskind JW, Wall D, Trawick JD, Carr GJ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to antisense inhibitors of genes essential to

                                                                                                                                                                                                                                                                                                                                                                                                                            antibudies, identification of L. monosytopones and related organisms, and for biosynthesis and biodegradation, especially biosynthesis of Vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that requiate gene expression and cell replication and modulate L. monosytopones, related diseases. In addition, the genome sequence and proteins encoded by it are useful in phaimaceutical and vaccines compositions for the treatment or prevention of infections by L.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         65 AIERASWI,PKISAGIPEPASEISALI,VEPGGKIQQLAEVEVAFTANYINYMAEWAPRYFG 124

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5 VQHPMYIDGQFVTWRGDAWIDVVNPATEAVISRIPDGQAEDARKAIDAAERAQPEWEALP 64
                                                                                                                                                                                                                                                                          monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention, Floteins expressed from the genome sequence are useful for raising specific
                                                                                                    for treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  182 TUNATAFAKTUDETGLPRGVENLVLGRGETVGOELAGNPKVAMVSMTGSVSAGEKIMATA

cyclododecanone degradation pathway and occurs tuber involved in the cyclododecanone degradation pathway and occurs tuber in the cyclododecanone degradation pathway and comprises genes (designated cdaA, cddB, cddX, cddY, cddC and cddD) enroding enrymes such as dodecanote discid synthesizing enryme, cyclododecanone monocygenase, laryl lactone caterase. Host cells comprising the nucleic acid are used for the production of dodecanedioic acid when contacted with cyclododecanone, l2-hydroxy lauric acid when contacted with 12-hydroxy lauric acid when contacted with 22-oxo lauric acid when contacted with 12-hydroxy lauric acid and dodecanedioic acid when contacted with 12-oxo lauric acid when contacted with 12-oxo lauric acid with cycloic acid when contacted with 12-oxo lauric acid with cycloic ketones with 6 to cight carbon atoms like C6, C10, C11, C12, C13 and C15 cyclic ketones with 6 to cight carbon atoms like C6, C10, C11, C12, C13 and C15 cyclic ketones, cycloidexanone, and cyclodecanone. The host cells are also used for the production of macrolactones with a tycloic ketone when contacted with a cyclic ketone when contacted with a cyclic ketone when contacted with a cyclic ketone for the bioproduction of macrolactones with a tyclic contacted with a cyclic ketone when contacted with a cyclic ketone contacted with a cyclic ketone for the bioproduction of macrolactones with a tyclic contacted with a cyclic ketone contacted with a cyclic ketone contacted with a cyclic ketone contacted with a cyclic ketone when contacted with a cyclic ketone when contacted with a cyclic ketone with a cyclic contacted mannotation of sequence of ORFG (cddb qene) encoding a 12-oxo lauric acid dehydrogenase enzyme isolated from a 10kb nucleic acid flaqment from K ruber SC1.
